

## Carrying out Visit orders

After entering a visit, the doctor can make various orders for the patient such as drugs, lab-tests and treatments. Further orders will be added in the future. Currently these modules are Pharmacy, Laboratory and Treatment. Each of these orders is carried out by staff attached to different out-patient departments. Each department staff have a separate module which allows them to record the orders carried out but does not reveal the clinical information. Additional drugs, labtests or treatments can be added in the data tables section.

### Pharmacy module

This module is chosen from the menu bar at the top of the screens. It allows the pharmacy staff in the out-patient dispensary to dispense the drugs prescribed by the doctors.

The first screen shows the prescriptions made today. Other days can be chosen using the calendar on this screen. You can also show all the prescriptions for this day or only the ones that have not been dispensed. The pharmacist can find the prescription from the patient name or registration number.

If you click on the row for one prescription, the screen that opens shows the details of each drug prescribed. By viewing the prescription on the screen, it is not necessary to print it on paper.

The computer calculates the number of tablets from the doctor's prescription. However this can be changed by the pharmacist if necessary.

At the end of each day (or in the morning before starting work), the number of tablets dispensed for an individual day can be listed. If you print it before finishing work, it will not be complete.

### Recording of lab test results

This module is chosen from the menu bar at the top of the screens. It allows the laboratory staff in the out-patient laboratory to record the result of the tests ordered by the doctors.

The first screen shows the tests ordered today. Other days can be chosen using the calendar for this field. You can also show all orders for this day or only the ones that are pending.

## Seeing treatments to be carried out and recording those done

This module is chosen from the menu bar at the top of the screens. It allows the nurses in the out-patient treatment room to see what treatments are needed and to record the fact that they have been carried out. The first screen shows the treatments ordered today. Other days can be chosen using the calendar on this screen. You can also show all the treatment orders for this day or only the ones that have not been carried out.
